2,306 Physician Assistants voluntarily participated in this survey. Without their efforts the work of the center would not be possible. The Department of Health Professions, the Healthcare Workforce Data Center, and the Board of Medicine express our sincerest appreciation for your ongoing cooperation.

Thank You!

Nearly 2,306 physician assistants voluntarily took part in the 2015 Physician Assistant Workforce Survey. The Virginia Department of Health Professions' Healthcare Workforce Data Center (HWDC) administers the survey during the license renewal process, which takes place during the birth month of a physician assistant on every odd-numbered year. These survey respondents represent 65% of the 3,530 physician assistants who are licensed in the state and 82% of renewing practitioners.

The HWDC estimates that 2,801 physician assistants participated in Virginia's workforce during the survey period, which is defined as those who worked at least a portion of the year in the state or who live in the state and intend to return to work in the profession at some point in the future. Virginia's physician assistant workforce provided 2,753 "full-time equivalency units" during the survey time period, which the HWDC defines simply as working 2,000 hours a year (or 40 hours per week for 50 weeks with 2 weeks off).

71% of physician assistants are female. The median age of all physician assistants is 37. In a random encounter between two physician assistants, there is a 31% chance that they would be of different races or ethnicities, a measure known as the diversity index. For the Virginia population as a whole, this same probability is 55%. Meanwhile, for physician assistants who are under the age of 40, the diversity index decreases to 28%.

Nearly one-third of physician assistants grew up in a rural area, and 15% of these professionals currently work in non-Metro areas of the state. Meanwhile, 42% of Virginia's physician assistants graduated from high school in Virginia, while 37% received their initial professional degree in the state. In total, nearly half of Virginia's physician assistant workforce has some educational background in the state.

76% of physician assistants have a master's degree as their highest professional degree, while 13% hold a baccalaureate degree. 80% of physician assistants who are under the age of 40 currently have educational debt. The median debt burden for those with educational debt is between \$60,000 and \$70,000.

97% of physician assistants were employed in the profession at the time of the survey. 72% hold one full-time position, while another 10% hold one part-time position. Less than 1% of physician assistants are involuntarily unemployed, while more than half have been at their primary work location for at least two years.

The median annual income for physician assistants is between \$90,000 and \$100,000, while close to a third earn more than \$110,000 per year. In addition to monetary compensation, nearly 90% receive at least one employer-sponsored benefit, including 70% who receive employer-sponsored health insurance. 97% of physician assistants indicate they are satisfied with their current employment situation, including 69% who indicate they are "very satisfied".

71% of all physician assistants work in Northern Virginia, Hampton Roads or Central Virginia. 61% of physician assistants work in for-profit establishments, while 28% work in the non-profit sector. With respect to establishment type, one-third of physician assistants work in a single-specialty group practice, while 14% work in the emergency department of hospitals.

Physician assistants spend nearly all of their time in patient care activities, with most of the remaining time spent on administrative tasks and educational activities. More than nine out of ten physician assistants serve a patient care role, meaning that at least 60% of their time is spent in patient care activities.

47% of physician assistants expect to retire by the age of 65. Only 10% of the current workforce expects to retire in the next decade, while half the current workforce expects to retire by 2045. Over the next two years, only 5% of the current workforce plans on leaving either the state or the profession. Meanwhile, 10% expect to pursue additional educational opportunities, while 11% plan on spending more time in patient care activities.

Using these estimates, retirements will begin to reach 10% of the current workforce starting in 2035. Peak retirement years will take place around 2050, when 19% of the current workforce expects to retire every five years. After 2035, retirements will not permanently fall below 10% of the current workforce during a five-year time interval until 2060.
